

A shared love of cooking

The chosen bilingual wordmark and intertwined AS monogram.

Alf
Sahten
ألف صحتين

Primary identity

Olive A and Arabic. Black remaining English letters. A cream AS on olive is the compact identity for the website, avatars and merchandise.

This kit preserves your selected direction. Outlined vectors, transparent PNGs, website icons, social scaffolds and print handoff files are included.

Logo system

Choose a version according to the background and available space.

Primary / light backgrounds

One-colour olive / light fabric

Protect the lettering

Keep the A, Arabic noon sweep and Arabic dots fully olive. English If and Sahten remain black. Use cream on dark backgrounds or a one-colour version for a single ink process.

Space and size

Leave 10% of full logo width clear on every side; 15% around standalone AS. Starting minimum: 180 CSS px for the full logo, or 45mm in print. Use AS when the stacked logo becomes too small.

Do not alter

Do not stretch, rotate, crop swashes, add shadows or gradients, or replace the custom lettering with a font. Keep the original proportions.

Colour and typography

Exact screen colours; physical colour needs supplier proofing.

OLIVE

#26361D

RGB 38 / 54 / 29

BLACK

#000000

RGB 0 / 0 / 0

CREAM

#F7F3EA

RGB 247 / 243 / 234

Match the existing website

The current App.css defines olive #26361D and cream #F7F3EA. Logo black is #000000; normal website body text is #191B15. Supporting colours: #EEE8DC, #405630, #6E6E66 and #FFFDF8.

Print and thread colour

Nominal CMYK: olive 30/0/46/79, black 0/0/0/100, cream 0/2/5/3. Vector PDFs use this conversion without a press-specific ICC profile. Match inks and thread to a physical approved sample; no Pantone or thread reference is claimed.

Typography

The logo is custom outlined artwork. Keep the existing Georgia-style editorial headings and DM Sans / Arial interface typography where configured. Keep the existing Arabic interface font and RTL rules. Fonts are not bundled.

Voice and photography

Warm, clear and useful. Focus on cooks, recipes and practical actions. Use natural food photography with honest colour. Avoid adding decorative motifs that are not part of this identity.

Website and small icons

Ready to copy into the public/brand folder; the website has not been changed.

AS is the compact identity

Use it for browser tabs, mobile navigation, profile images and app shortcuts. Keep the olive tile for contrast in light and dark browser themes.

Website files

SVG logo and icon; 16, 32, 48, 64, 192 and 512px PNGs; multi-size favicon.ico; 180px Apple touch icon; 512px maskable icon. Copy logo-cream.svg from logos/ alongside the website assets.

Integration

Use head-snippet.html, site.webmanifest, brand-tokens.css and BrandLogo.tsx. The manifest uses /brand/ paths; change them together if your asset directory differs. A manifest does not add offline support.

Header proportions

The approved logo is stacked, not a shallow horizontal lockup. Start at 180px width with proportional height, or show AS in compact mobile navigation. Do not squash the logo to fit.

Sharing and accessibility

Default share image: 1200 x 630 PNG. Set og:image to your real absolute deployment URL. Use alt="Alf Sahten" on the logo; translate the surrounding home-link label. Page titles and descriptions should match each real page.

Tiny-size check

16px is inherently less detailed than the avatar. Inspect the included icon PNGs at native size in the browser before launch; retain the same identity rather than adding new decoration.

Social and packaging

Reusable identity assets and editable content scaffolds.

Social sizes

1080px square avatar; 1080 x 1350 feed-post scaffold; 1080 x 1920 story scaffold. SVG templates can be edited and PNG copies are supplied. Replace placeholder blocks with your food photography and content.

Business cards

85 x 55mm trim plus 3mm bleed: front/back concept PDFs have trim and bleed boxes. The back is intentionally blank for actual contact details. Add real information and proof the file before printing.

Packaging seal

50mm square trim in a 56mm bleed page, designed as a round seal concept. The PDF has artwork but no die line. Ask the printer for its cutting template, safe area, material and colour proof.

Clothing and embroidery

Use the AS for small placements and the full wordmark for larger prints.

Placement starting points

Left chest AS: 65-80mm wide. Apron centre AS: 90-120mm. Full logo on upper back: 220-280mm. Cap AS: about 45-55mm only if the supplier can preserve the thin strokes. See the apparel placement sheet.

Colour on fabric

Olive on cream or light fabric. Cream or supplier-approved off-white on olive and black fabric. Choose one-colour artwork for simpler manufacturing. Fabric, thread and screen ink will not match screen HEX values automatically.

Screen print / DTF / DTG

Send an outlined SVG or vector PDF, intended physical width and garment colour. Supplier determines ink, underbase, separations and curing. Transparent 300dpi PNGs are also supplied for workflows that require raster.

Embroidery needs digitizing

The AS SVG is artwork, not machine stitches. Your embroiderer must digitize for the chosen size, fabric, hoop and machine, strengthen hairlines where necessary, and provide a sample sew-out. No DST or PES file is included.

Proof before producing

Check thin strokes, open loops and Arabic dots at actual size. Avoid the full bilingual logo for small embroidery. Approve a physical sample on the intended garment before a batch is produced.

File handoff

Choose the smallest appropriate format; keep masters separate from templates.

SVG / editable outlined artwork

Actual vector paths with transparent backgrounds, no bitmap or external font. Use for website, layout, screen printing and vendor handoff. Import SVG into Illustrator, Affinity Designer or Inkscape; no proprietary AI/EPS file is claimed.

PNG / raster exports

Transparent logo masters at 2400px and monograms at 2000px. Opaque avatar/app/share images are separate. Apparel PNGs have 300dpi metadata; physical output size still depends on pixel dimensions and vendor requirements.

PDF / print artwork

Nominal CMYK vector PDFs for primary, olive, black and cream wordmarks and AS. Artwork pages include small margins. A PDF viewer shows white page space; it is not a printed white rectangle. No press-specific ICC profile is embedded.

Source and provenance

Selected references and high-resolution generated extractions are retained. Extraction used the built-in image tool, then silhouettes were traced into smoothed vector paths and exact inks. These are auto-traced, not a hand-redrawn Bezier identity; minor contour differences from the screenshots can remain.

What remains production-specific

Premium signage may benefit from designer contour cleanup. Embroidery digitizing, cutting dies, garment patterns, printer profiles, thread references and final content require the actual supplier or layout. This kit does not claim trademark clearance.
